NOTE: Mathematical standards are interwoven and should be addressed throughout the year in as many different units and tasks as possible in order to stress the natural connections that exist among mathematical topics.

Grades 3-5 Key: G= Geometry, MD=Measurement and Data, NBT= Number and Operations in Base Ten, NF = Number and Operations, Fractions, OA = Operations and Algebraic Thinking.

#### **Georgia Standards of Excellence 3.2 Curriculum Map** Georgia Standards of Excellence: Curriculum Map **Standards for Mathematical Practice 1** Make sense of problems and persevere in solving them. 5 Use appropriate tools strategically. 2 Reason abstractly and quantitatively. 6 Attend to precision. **3** Construct viable arguments and critique the reasoning of others. 7 Look for and make use of structure. 4 Model with mathematics. 8 Look for and express regularity in repeated reasoning. 3rd Unit 6 3<sup>rd</sup> Unit 4 3rd Unit 5 4<sup>th</sup> Unit 1 **Representing and Comparing** Geometry Measurement Whole Numbers. Place Value and **Rounding in Computation Fractions** Reason with shapes and their attributes. Develop understanding of fractions as Solve problems involving measurement and Generalize place value understanding for MGSE3.G.1 Understand that shapes in estimation of intervals of time, liquid multi-digit whole numbers. numbers. volumes, and masses of objects. MGSE4.NBT.1 Recognize that in a multidifferent categories (e.g., rhombuses, **MGSE3.NF.1** Understand a fraction $\frac{1}{h}$ as the MGSE3.MD.1 Tell and write time to the digit whole number, a digit in any one place rectangles, and others) may share attributes quantity formed by 1 part when a whole is (e.g., having four sides), and that the shared nearest minute and measure time intervals in represents ten times what it represents in the partitioned into *b* equal parts (unit fraction); attributes can define a larger category (e.g., minutes. Solve word problems involving place to its right. For example, recognize that understand a fraction $\frac{a}{b}$ as the quantity formed addition and subtraction of time intervals in $700 \div 70 = 10$ by applying concepts of place quadrilaterals). Recognize rhombuses, by *a* parts of size $\frac{1}{b}$ . For example, $\frac{3}{4}$ means there are $3\frac{1}{4}$ parts, so $\frac{3}{4} = \frac{1}{4} + \frac{1}{4} + \frac{1}{4}$ . rectangles, and squares as examples of minutes, e.g., by representing the problem on value and division. quadrilaterals, and draw examples of a number line diagram, drawing a pictorial MGSE4.NBT.2 Read and write multi-digit quadrilaterals that do not belong to any of representation of a clock face, etc. whole numbers using base-ten numerals, MGSE3.NF.2 Understand a fraction as a MGSE3.MD.2 Measure and estimate liquid number names, and expanded form. Compare these subcategories. number on the number line; represent fractions MGSE3.G.2 Partition shapes into parts with volumes and masses of objects using standard two multi-digit numbers based on meanings of on a number line diagram. equal areas. Express the area of each part as a units of grams (g), kilograms (kg), and liters the digits in each place, using >, =, and <**a.** Represent a fraction $\frac{1}{h}$ on a number unit fraction of the whole. For example, (1).<sup>1</sup> Add, subtract, multiply, or divide to solve symbols to record the results of comparisons. partition a shape into 4 parts with equal area. one-step word problems involving masses or MGSE4.NBT.3 Use place value line diagram by defining the interval and describe the area of each part as 1/4 of volumes that are given in the same units, e.g., understanding to round multi-digit whole from 0 to 1 as the whole and the area of the shape. by using drawings (such as a beaker with a numbers to any place. partitioning it into b equal parts. measurement scale) to represent the problem.<sup>2</sup> **Represent and interpret data.** Use place value understanding and Recognize that each part has size $\frac{1}{b}$ . Recognize that a unit fraction $\frac{1}{b}$ is MGSE3.MD.3 Draw a scaled picture graph Represent and interpret data. properties of operations to perform multi-MGSE3.MD.3 Draw a scaled picture graph and a scaled bar graph to represent a data set digit arithmetic. with several categories. Solve one- and twolocated $\frac{1}{b}$ whole unit from 0 on the number line. and a scaled bar graph to represent a data set MGSE4.NBT.4 Fluently add and subtract step "how many more" and "how many less" with several categories. Solve one- and twomulti-digit whole numbers using the standard step "how many more" and "how many less" problems using information presented in algorithm. **b.** Represent a non-unit fraction $\frac{a}{b}$ on a number line diagram by marking off *a* lengths of $\frac{1}{b}$ (unit fractions) from 0. Recognize that the resulting scaled bar graphs. For example, draw a bar problems using information presented in Use the four operations with whole graph in which each square in the bar graph scaled bar graphs. For example, draw a bar numbers to solve problems. might represent 5 pets. graph in which each square in the bar graph MGSE4.OA.3 Solve multistep word MGSE3.MD.4 Generate measurement data might represent 5 pets. problems posed with whole numbers and by measuring lengths using rulers marked with MGSE3.MD.4 Generate measurement data by having whole-number answers using the four interval has size $\frac{a}{b}$ and that its halves and fourths of an inch. Show the data operations, including problems in which measuring lengths using rulers marked with

<sup>&</sup>lt;sup>1</sup> Excludes compound units such as cm<sup>3</sup> and finding the geometric volume of a container.

<sup>&</sup>lt;sup>2</sup> Excludes multiplicative comparison problems (problems involving notions of "times as much"; see Glossary, Table 2).

by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters. **MGSE3.MD.7** Relate area to the operations of multiplication and addition.

- **a.** Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths.
- b. Multiply side lengths to find areas of rectangles with whole number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.
- **c.** Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths *a* and *b* + c is the sum of  $a \times b$  and  $a \times c$ . Use area models to represent the distributive property in mathematical reasoning.
- d. Recognize area as additive. Find areas of rectilinear figures by decomposing them into nonoverlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real world problems.

#### Geometric measurement: recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.

**MGSE3.MD.8** Solve real world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters. endpoint locates the non-unit fraction  $\frac{a}{b}$  on the number line. **MGSE3.NF.3** Explain equivalence of fractions in special cases, and compare fractions by reasoning about their size.

- a. Understand two fractions as equivalent (equal) if they are the same size, or the same point on a number line.
- b. Recognize and generate simple equivalent fractions, e.g., 1/2 = 2/4, 4/6 = 2/3). Explain why the fractions are equivalent, e.g., by using a visual fraction model.
- c. Express whole numbers as fractions, and recognize fractions that are equivalent to whole numbers. *Examples: Express 3 in the form 3 =* 3/1; recognize that 6/1 = 6; locate 4/4 and 1 at the same point of a number line diagram.
- d. Compare two fractions with the same numerator or the same denominator by reasoning about their size. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with the symbols >, =, or <, and justify the conclusions, e.g., by using a visual fraction model.</li>

### Represent and interpret data.

**MGSE3.MD.3** Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and twostep "how many more" and "how many less" problems using information presented in scaled bar graphs. *For example, draw a bar graph in which each square in the bar graph might represent 5 pets.* 

MGSE3.MD.4 Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units whole numbers, halves, or quarters. halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units whole numbers, halves, or quarters remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

MGSE4.MD.2 Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.

mental computation and estimation strategies including rounding.

Gain familiarity with factors and multiples. MGSE4.OA.4 Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.

#### Generate and analyze patterns.

**MGSE4.OA.5** Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers.

#### <u>Generalize place value understanding for</u> <u>multi-digit whole numbers.</u>

<u>Use place value understanding and</u> properties of operations to perform multidigit arithmetic.

**MGSE4.NBT.5** Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

MGSE4.NBT.6 Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models. MGSE4.MD.2 Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement

having like denominators, e.g., by using visual fraction models and equations to represent the problem. MGSE4.NF.4 Apply and extend previous understandings of multiplication to multiply a fraction by a whole number e.g., by using a visual such as a number line or area model. a. Understand a fraction a/b as a multiple of 1/b. For example, use a visual fraction model to represent 5/4 as the product  $5 \times (1/4)$ , recording the conclusion by the equation  $5/4 = 5 \times (1/4)$ . b. Understand a multiple of a/b as a multiple of 1/b, and use this understanding to multiply a fraction by a whole number. For example, use a visual fraction model to express  $3 \times (2/5)$  as  $6 \times (1/5)$ , recognizing this product as 6/5. (In general.  $n \times (a/b) = (n \times a)/b$ .) c. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat 3/8 of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does vour answer lie? **MGSE4.MD.2** Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.

quantities using diagrams such as number line diagrams that feature a measurement scale. <b>MGSE4.MD.8</b> Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non- overlapping parts, applying this technique to solve real world problems.
